ICAS ENHANCES HEALTH CARE QUALITY

ICAS Contracted to Provide Renovations for Largest Public Health Center in the Bronx

Long Island City, NY, November 15, 2009 - ICAS, a leader in providing efficient and innovative technology to the health care industry, has contracted with one of New York's prominent hospitals to restructure an existing data center. Over one million people will benefit from ICAS' reliable and well-timed dedication to improving health care technology. The established Bronx hospital will be receiving top of the line site security, upgrades, installations, and managed services. These services promise improved efficiency and will increase the availability of quality health care to more patients.

The president of ICAS, Matthew Bonfitto, exclaims "ICAS is honored to support such a prolific community hospital. I'm confident our reliable and leading edge technology will improve the arduous job that health professionals carry on daily." Not only will the ICAS partnership support daily hospital tasks, but it will be utilized in training of new professionals. Mr. Bonfitto adds, "Our commitment to health care improvements extends beyond our current clients, we want to ensure that technological productivity is positioned for future generations."

Large scale renovations are customary for ICAS. The company's competencies extend across several markets, including health care, finance, education, retail, energy, government and hospitality. ICAS provides robust technology solutions that translate into affordable services.

ICAS is a national leader in single source solutions for competitive turnkey network infrastructure technology designs, installations of wire and wireless networks, copper and fiber cable systems, security, CCTV, and data installations. The company has achieved leadership position through insightful solutions in project management, consultation, development, and network certifications.
