ICAS | YOU'RE IN GOOD
COMPANY
SINCE 1979

ICAS

OBJECTIVES

For over 40 years ICAS has serviced schools, public, and private companies delivering new technology according to new requirements.

Our goal is to support the schools and parents by creating a safer learning environment for children. More and more schools are implementing solutions for child safety and prevention.

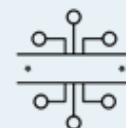

ABOUT ICAS

True to the principle of honest work and quality products, ICAS has built strong client relationships ranging from neighborhood businesses and municipal districts to Fortune 500 companies.

ICAS now offers diversified services and products including installation of:

- Gunshot detectors
- Vape detectors
- Electrical and security services
- Cable infrastructure Wifi

ICAS IDEOLOGY

How do they remain leaders in the industry and continue to be first choice by business partners? How will they continue to grow and thrive? The answer is both complex and simple: Elevate!

Our mission is to serve our clients by providing innovative technology through a single source solution. A robust infrastructure results in more efficient productivity, and provides people with an environment to focus on core business objectives.

TODAY IS THE DAY TO PROTECT OUR SCHOOLS

ICAS is now assisting schools to understand how to create a healthy and safe environment by understanding the challenges, implementing policies, and assuring a successful solution customized for your school can be implemented and secured.

SCHOOL SECURITY SOLUTIONS

VAPE DETECTOR

FlySense™ is a real-time vaping and elevated sound incident detection solution. Smart alert system gives you control of areas where you cannot place a camera or microphone. When a sensor detects chemicals from vaping, and detects decibel level anomalies that suggest violence, the device sends an immediate, location-specific notification to the flysense dashboard or mobile devices of one or more designated school officials.

GUNSHOT DETECTOR

Detects gunshot sound, informs law enforcement immediately which expedites a faster response time for law enforcement to arrive. AmberBox technology provides gunshot location, movement of shooter, gunshot times and total number of shots fired. AmberBox uses acoustic and infrared data to respond immediately following a firearm discharge. The device responds within 3.6 seconds for faster police arrival.

IRIS EYE SCAN

EyeLock uses video based technology to look at more than 240 unique characteristics in each iris. Iris authentication is highly secure because no two irises are alike and the iris is the most accurate human identifier other than DNA. It can be used in a variety of environments including commercial/enterprise, data centers, education, financial services, government, healthcare facilities and hospitality.
